

DNAFit offers its clients customized diets, fitness schedules and health tips, based on a thorough analysis of the individual's DNA.

The client required automating Health Reports, an automated payment system and maintaining all the data in Salesforce.com®.

We created a multilingual portal that recommended exercise and diet plans based on a user's genes and also created a Stripe payment system for DNAFit and 23andMe.

Full and clear information was made available for the customer to understand the test and clarity on privacy and use of customer's DNA.

Here's a list of all the platforms & technologies that were used in making this project possible.
